

INVESTIGATING CARBON ALLOCATION PATTERNS OF BELOWGROUND CROP ORGANS UNDER MULTIPLE STRESS

Kwabena Agyei (Enabling Technologies)

Supervisors: Robert Koller, Ralf Metzner, Daniel Plugfelder, Dagmar van Dusschoten, Gregor Huber and Uwe Rascher

- Objectives:**
1. To determine multiple stressors (MS) effect on structural development of sugar beet.
 2. Ascertain the effects of MS on carbon allocation dynamics of sugar beet
 3. Determine which shoot physiological traits are linked to belowground beet traits
