

Cognitive Computing – (The new AI)

Symbiotic fusion of the intelligent system, the user, and the expert.

Dialog between machine and human (natural language, intuitive graphics, and gestures)

The machine is the super assistant that enables the human to make truly intelligent decisions in complex scenarios.

IBM
Academic Initiative

Speak with Watson Flu

ASK QUESTIONS & GET ANSWERS

Type your question to Watson about the flu

ask

AND LAS VEGAS NEXT WEEK?

I predict a minimal flu risk (1.57 out of 10) for Las Vegas.

WHAT'S THE FLU LEVEL IN NEW YORK RIGHT NOW?

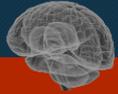

Alright, here is the data for New York from now: a minimal flu risk (1 out of 10). What else can I do for you?

HI WATSON!

Supported by:

IBM
Academic Initiative

Data science methods

- Data science allows identification of very complex causal relations

Social media analysis

- Combine social media with other conventional data to get the best of both worlds → realtime and reliable

Watson as expert

- Use unstructured data to learn relationships

ALP – Mobile Cloud Diagnosis

Prof. Dr. Gordon Pipa, Osnabruck University

Prof. Dr. Dr. Bertram Scheller, University Hospital Frankfurt

ALP: A Proposal for the use case epilepsy

- 50 million people worldwide, with 80% in developing regions
- There, mostly older AEDs are administered by non-physician health care workers (~10\$ a month)
- Sustainable service since the social and economic problems outweigh investment for treatment by far

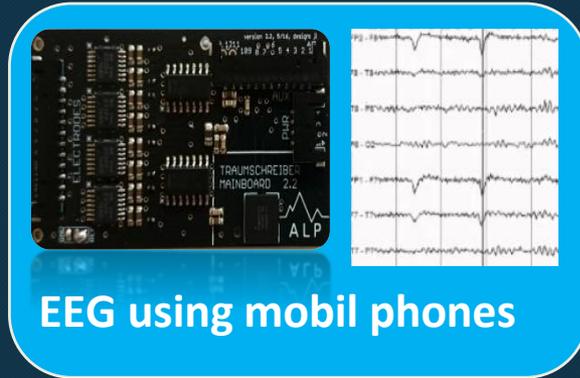

→ The crucial step is the diagnosis and crowd support by experts

ALP: A CLOUD IOT/AI System for treating epilepsy

IoT

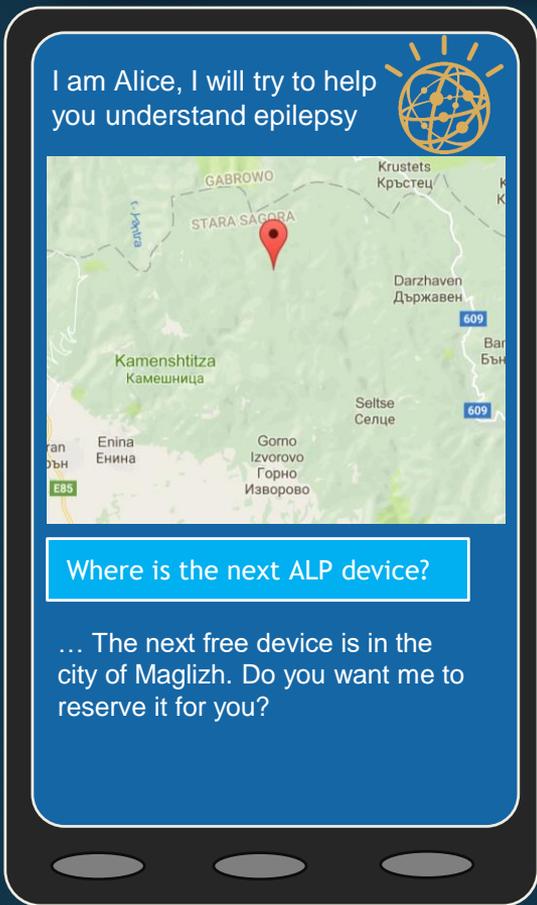

- Simple App for generating awareness and informing patients and relatives in spoken natural language

https://www.youtube.com/watch?v=LS4_jwVY3mc
from Epilepsy Action. The UK's leading epilepsy charity

ALP: A CLOUD IOT/AI System for treating epilepsy

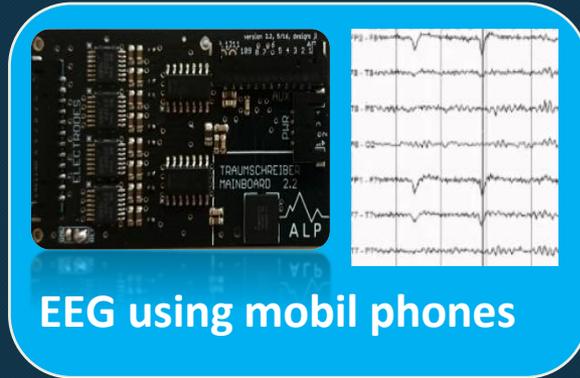

- It helps in locating ALP crowd EEG devices
- It establishes a network of patients and medical care

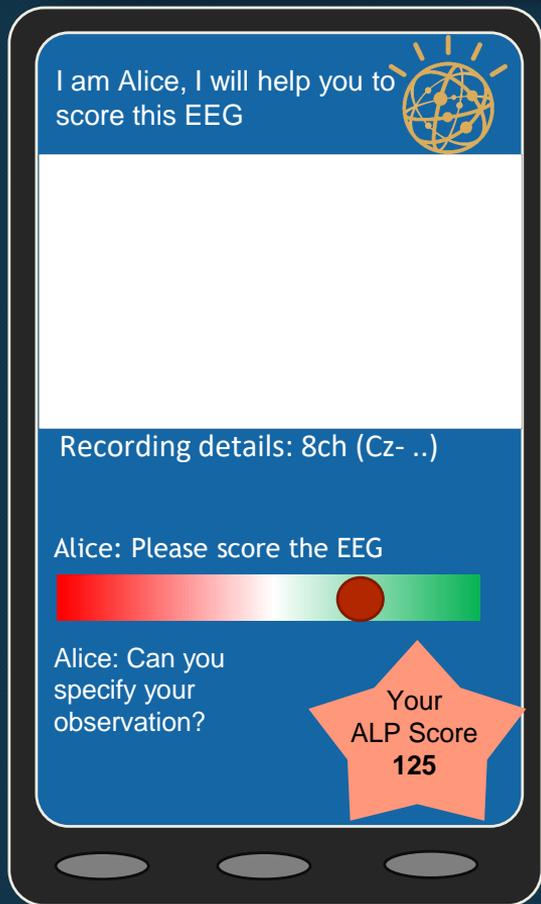

ALP: A CLOUD IOT/AI System for treating epilepsy

IoT

ALP: A CLOUD IOT/AI System for treating epilepsy

Cloud
Doctor

EEG will be scored
automatically and by cloud
doctors.

- Simple App for **CLOUD scoring** the EEG and videos.
- **AI** to support treatment with **recommendations**
- Gamification for **CLOUD doctors** by **ALP Score**.

2.1 Die Notwendigkeit der Psychologie als Wissenschaft 21 2

» Für unsere amerikanischen Vettern mag das Telefon ja eine nützliche Erfindung sein, aber nicht für uns. Wir haben genügend Botenposten.

Urteil einer britischen Expertenrunde über die Erfindung des Telefons

Wir Menschen neigen dazu, zu glauben, wir wüssten mehr, als wir tatsächlich wissen. Auf die Frage, wie sicher wir sind, die richtigen Antworten auf Sachfragen zu wissen (*Lüge Boston* nördlich oder südlich von *Boston*) antworten wir eher mit Selbstvertrauen als mit korrektem Wissen. Schauen Sie sich einmal die drei folgenden Anagramme an:

Serwas → Wasser
Toomy → System
Harrox → Thorax

Wie glauben Sie, wie viele Sekunden Sie etwa gebraucht hätten, um jedes dieser Anagramme aufzulösen? Sobald man die Lösung kennt, steigt die nachträgliche Einsicht dafür, dass sie eine absolut selbstverständlich erscheint. Das führt zu übertriebenem Selbstvertrauen. Wir glauben, wir hätten die Lösung in höchstens 10 Sekunden gefunden, während tatsächlich der Durchschnitt bei 3 Minuten liegt. Und diese 3 Minuten hätten Sie auch gebraucht, wenn Sie die Lösung nicht gekannt hätten. Probieren Sie es mit einem weiteren Anagramm aus: ACHENFU?

Sind wir besser, wenn es darum geht, soziales Verhalten vorherzusagen? Der Psychologe Philip Tetlock (1998, 2005) von der

2.1.3 Wahrnehmung von Ordnung bei zufälligen Ereignissen

In unserer naturgegebenen Bereitschaft, unserer Welt einen Sinn zu verleihen – eine Eigenschaft, die der Dichter Wallace Stevens unsere «Ordnungswaise» nennt – folgen wir dazu, Muster wahrzunehmen. Menschen sehen ein Gesicht im Mond, hören satanische Botschaften in Musikstücken oder erblicken das Abbild der langfrau Maria auf einem gegrillten Käsesandwich. Selbst in zufällig zusammengewürfelten Informationen finden wir oft eine Ordnung. Jensei – und damit müssen wir uns wohl oder übel abfinden – eine zufällige Abfolge von Daten sieht häufig nicht zufällig aus (Falk et al. 2009; Nickerson 2002, 2005). Tatsächlich treten in Zufallssequenzen Muster oder Reihen (wie wiederholte Ziffern) öfter auf, als die Menschen glauben (Oskerson et al. 2009). Um mir das einmal selbst zu demonstrieren – und Sie können das natürlich selbst auch probieren –, habe ich eine Münze 51-mal geworfen. Hier die Ergebnisse:

1.K	11.2	21.2	31.2	41.K	51.2
2.Z	12.K	22.Z	32.Z	42.K

KONSEKUTIVER BERUFSBEGLEITENDER MASTER IN *COGNITIVE SCIENCE*

Universität Osnabrück - Institut für Kognitionswissenschaft

Juni 2016

Studienorganisation

Das berufsbegleitende Studium *Cognitive Science* kann in Blockwochen abgeleistet werden. Im Ergebnis sind die Studierenden im ersten, zweiten und dritten Semester jeweils zu ca. 50% ihrer Studienzzeit in Osnabrück und zu ca. 50% ihrer Studienzzeit bei PARTNER oder Kunden von PARTNER. Die Kurse werden basierend auf vorheriger Absprache mit den PARTNER Masterstudierenden geblockt angeboten.

Semester 1	BW 1-2	PARTNER			BW 3-4	PARTNER			BW 5-6
Dauer	2W	3W			2W	3W			2W
Semester 2	BW 1-2	ST*	PARTNER / ST*	ST*	PARTNER / ST	ST*	PARTNER / ST	ST*	BW 5-6
Dauer	2W	2T		3T		3T		2T	2W
Semester 3	BW 1-2	ST*	PARTNER / ST*	ST*	PARTNER / ST	ST*	PARTNER / ST	ST*	BW 5-6
Dauer	2W	2T		3T		3T		2T	2W
Semester 4	Masterthese (6 Monate)								

*ST: Studienprojektbezogene Arbeit. Kann bei PARTNER oder bei PARTNER-Kunden durchgeführt werden. Das Projekt wird durch die Lehrenden des Instituts für Kognitionswissenschaft begleitet. Dazu sind neben Online Tools 3 ST-Meetings pro Semester vorgesehen.

*BW: Blockwoche mit Blockunterricht in den jeweiligen Kursen.

Zentrum für Informationsmanagement und Virtuelle Lehre (virtUOS)

Alle Kurse des berufsbegleitenden Masterstudienganges werden überwiegend als Online-Vorlesung bzw. Online-Seminar mit elektronisch durchsuchbaren Slides und als druckbares Material online zur Verfügung stehen.
