

# The International Helmholtz Research School of Biophysics and Soft Matter offers a Guest Student Programme

from 22 July to 30 September 2023.

Now compatible with more countries! In 2023, several dates may be possible.  
Depending on the project, a stay of 8-10 weeks may start any time in July.

Are you a master's student in physics, chemistry, biology, neuroscience, or a related subject and would like to work on a project together with one of our scientists?

Are you interested in gaining research experience in an interdisciplinary and international environment, exploring science where traditional disciplines overlap?

Would you like to learn more about...

... soft matter (colloids, polymers, membranes, complex fluids, flow dynamics, active matter, ...),

... biophysics (biomechanics, structural biochemistry, molecular biophysics, bioelectronics, ...)

... neuroscience (neurobiology, cellular signalling pathways, ion channels, neuronal mechanics, ...)

... or related techniques (NMR, scattering techniques, computer simulations, spectroscopy, microscopy, ...)?

Then apply for our guest student programme in Jülich, Aachen, Bonn, Cologne, and Düsseldorf!

Further information and admission guidelines:
